## Section 1

### What is a PDK?

# Wikipedia definition

**A process design kit (PDK)** is a set of files used within the semiconductor industry to model a fabrication process for the design tools used to design an integrated circuit. The PDK is created by the foundry defining a certain technology variation for their processes. ...

... The designers use the PDK to design, simulate, draw and verify the design before handing the design back to the foundry to produce chips. The data in the PDK is specific to the foundry's process variation and is chosen early in the design process, influenced by the market requirements for the chip. An accurate PDK will increase the chances of first-pass successful silicon.

Source: [https://en.wikipedia.org/wiki/Process\\_design\\_kit](https://en.wikipedia.org/wiki/Process_design_kit)

# Open-source viewpoint

- Semiconductor industry started to integrate open-source.
- Open-source PDKs created by Semiconductor Fabs were a “missing link” between:
  - Open-source EDA tools (RTL-to-GDS) and
  - Microchip production (GDS-to-Chip)
- Since there is open-source PDKs, the growth of the open-source ecosystem is measurable.
- Many of the tools have been the classical “one-person maintained” open-source projects. It is getting better.

# In the context of this course

The PDK (ihp-sg13g2) integrates seamless (to the user) into the OpenROAD flow scripts toolchain.

We have seen reference points from the tools onto the PDK in:

- the configuration files
- the structure of the design directories
- some Variables

# Naming

PDKs are referred to as:

- Process design kits
- Process node
- Technology node
- Technology

## Section 2

# Open-Source PDK and GitHub

# Difference from closed source

With publishing a PDK under a open-source license, the development from there on becomes a worldwide visible joint effort. The number of contributors and authors of the PDK can only increase from here on.

# Collaborative workflow in GitHub

Some of the main principles of open-source are the permissions to use, study, change and re-distribute the published code and data according to the license. This leads to a open collaboration in which everyone can participate.

GitHub enables a workflow that was designed and build with these principles and opportunities in mind. A good starting point to explore the open collaboration in the IHP PDK are

- Issues (open and closed)
- Pull requests (open and closed)

The topics and discussions that you can read and study there will draw a picture of how the process of open collaboration works for the PDK.

# The README

The Readme file in the PDKs repository is the starting point for information about the content of the PDK.

<https://github.com/IHP-GmbH/IHP-Open-PDK/blob/main/README.md>

**IHP Open Source PDK**

130nm BiCMOS Open Source PDK, dedicated for Analog/Digital, Mixed Signal and RF Design

IHP Open Source PDK project goal is to provide a fully open source Process Design Kit and related data, which can be used to create manufacturable designs at IHP's facility.

As of March 2023, this repository is targeting the SG13G2 process node.

# Project roadmap

A GANTT chart of the roadmap for the open-source PDK is available under this weblink. It shows the projects timeline (2022 - 2026):

[https://github.com/IHP-GmbH/IHP-Open-PDK/blob/main/ihp-sg13g2/libs.doc/roadmap/open\\_PDK\\_gantt.png](https://github.com/IHP-GmbH/IHP-Open-PDK/blob/main/ihp-sg13g2/libs.doc/roadmap/open_PDK_gantt.png)

Figure 5: Gantt chart

# Cells in the PDK

There are four different sets of cells (or devices) in the PDK:

- Base cellset with limited set of standard logic cells
  - CDL, GDSII, LEF, Tech LEF
  - Liberty, SPICE Netlist, Verilog
- IO cellset
  - GDSII, LEF, Liberty (dummy), SPICE Netlist
- SRAM cellset
  - CDL, GDSII, LEF, Liberty, Verilog
- Primitive devices
  - GDSII

# Other data in the PDK

- KLayout tool data:
  - layer property and tech files
  - DRC rules (minimal set)
  - PyCells
    - initial version of the wrapper API
    - sample cells
- Pcells (for reference only) `libs.tech/pycell`
- MOS/HBT/Passive device models for ngspice/Xyce
- xschem: primitive device symbols, settings and testbenches
- OpenEMS: tutorials, scripts, documentation
- SG13G2 Process specification & Layout Rules
- MOS/HBT Measurements in MDM format
- Project Roadmap Gantt chart

# Standard cell library

ToDo:

- Where in the RTL-to-GDS is the cell library needed?
- Design to cells to GDS and Tapeout
- Naming of the cells

# A single cell from the library

## ToDo:

- Pick one cell
- Pictures of the layers of the cell
  - Klayout
  - 3D Rederings?
- Schematic of the cell

# Layer stack

IHP sg13g2 Layers in a picture.

# Layerr table from Stefffen

ToDo: Add Steffens layer table here

# Picture of a cell

ToDo: Insert the 3d rendering of a IHP cell from Tynytapeout. Try to match the layers
