

## Chapter 04 - OpenROAD first run - TRAINING - Advanced

Course authors (Git file)

- 1 Integrate a new design into OpenROAD flowscripts

# Integrate a new design into OpenROAD flowscripts

In this training session you will integrate a new design for using it with OpenROAD flowscripts. You can either: \* Have your own design ready. \* Take an opensource design from someone else.

# Run the flowscript

Todo.

# Success

Todo. \* The chosen design should finish after a while and a lot of console output with a table (time/memory) like this:

1	Log	Elapsed seconds	Peak Memory/MB
---	-----	-----------------	----------------

CONGRATS! Your first(?) design got build to a GDS!
