

## Chapter 04 - OpenROAD first run - TRAINING - Bonus

Course authors (Git file)

## 1 Integrate a new design into OpenROAD flowscripts

# Integrate a new design into OpenROAD flowscripts

In this training session you will integrate a new design for using it with OpenROAD flowscripts. You can either: \* Have your own design ready. \* Take an opensource design from someone else.

# Pick a design to integrate

- LSFR from earlier?
- Pre-selected TinyTapeOut designs?

# Run the flowscript

Todo.

# Success

Todo. \* The choosen design should finish after a while and a lot of console output with a table (time/memory) like this:

Log	Elapsed seconds	Peak Memory/MB
-----	-----------------	----------------

CONGRATS! Your first(?) design got build to a GDS!
