

## Chapter 02 - Terminology - TRAINING - Common

Course authors (Git file)

## 1 Searching

# Browse the resources

## Task: Review the flow terminology

- Try to formulate the meaning and purpose of all the following search results in your own words.
- Search for each of the flow steps
  - Synthesis
  - Floorplan
  - Placement
  - Clock Tree Synthesis
  - Routing
  - Finishing
- Search for as much flow components as possible (see the components names in the diagram in the lecture slides)
- If no result is found, try a search engine (or chatGPT).

Matt Venns list:

<https://www.zerotoasiccourse.com/terminology/>

## Getting the words in place

In the beginning it can be hard to learn all the new words and give them meaningful connections immediately.

Let's try to create a timeline (or taskline) for "How to make microchips?" in a joint effort.

**Task: Create a diagram "How to make a microchip?"**

- Everyone can give a keyword of the topic "How to make a microchip?"
- We try to figure out the meaning and the position in a timeline / taskline?
- Flipchart, Whiteboard, Texteditor?

# List the open-source tools in OpenROAD

OpenROAD uses a lot of open-source tools, that were available even before OpenROAD.

## Task: Create a list of tools

- Use this link list as the knowledge base:
  - <https://openroad-flow-scripts.readthedocs.io/en/latest/tutorials/FlowTutorial.html#running-the-automated-rtl-to-gds-flow>
- Find the names of the open-source tools that are used in ORFS.
- Create a list with the columns:
  - Name of the open-source tool
  - Flow step and flow component in ORFS where the tool is used.
  - Description of the function of the tool
  - Bonus: What was modified or contributed to this tool by the OpenROAD team?

## Example row

### Example row in the list:

- Yosys
- Synthesis
- Verilog and constraints to netlists
- Most of the initial development was coded by Claire Wolf (not by ORFS)
