Chapter 04 - OpenROAD first run - TRAINING - Advanced

Course authors (Git file)

1. Integrate a new design into OpenROAD flowscripts

Integrate a new design into OpenROAD flowscripts

In this training session you will integrate a new design for using it with OpenROAD flowscripts. You can either: * Have your own design ready. * Take an opensource design from someone else.

Run the flowscript

Todo.

Success

Todo. * The choosen design should finish after a while and a lot of console output with a table (time/memory) like this:

```
1   Log                              Elapsed  seconds  Peak  Memory/MB
```

CONGRATS! Your first(?) design got build to a GDS!
